Routine Desexing

After Care Notes

If your pet had an anaesthetic today we suggest a half normal meal this evening with water freely available. Occasionally a pet chews its stitches out, and you can't watch your pet 24 hours per day. Therefore to avoid a \$55 re-stitch fee please put a bucket on your pet's head if it has stitches. If you would prefer we have clear chew protection collars made to measure for sale.

Stitches are removed 10-14 days after surgery (male cats excluded)

If your pet has had a drain tube put in today it is routinely removed 3-5 days after surgery.

You can come without an appointment for stitch or drain removal any day during normal business hours.

Please telephone the clinic if you have any concerns at all. Please check your pet's wound frequently.

Please also, as a healthy routine, doublecheck any expiry dates on products or medications where appropriate.
